

P-PACK with RCBO

- Add RCBO protection to new or existing P-Pack power systems
- Neat solution to providing RCBO protection to a desktop unit
- Uses standard Start and Inter leads
- BS6396:2015 compatible

The updated BS6396:2008+A1:2015 says a 16A 30mA type C RCBO or RCD should be used in a circuit from the 13A socket if no other provision has been made before that point, to ensure maximum protection to the desk.

As with all standard PowerData Technologies desk products a GST18 input / output compatible with our mains, interconnecting leads, under-desk and desktop products is used so the GST fed RCBO unit are compatible with all units.

P-PACK with RCBO

P-Pack PF/G

In-line covered 16A 30mA type C RCBO, GST input / output

P-PACK 4/RCBO

4-way individually 5A fused sockets orientated north, covered 16A 30mA type C RCBO, GST input /

P-PACK 6/RCBO

6-way individually 3.15A fused sockets orientated north, covered 16A 30mA type C RCBO, GST input / output
