MODULAR CONTAINMENT

MODULAR CONTAINMENT

The AisleLok® Modular Containment system provides an out-of-the-box aisle containment solution.

Its design means it can be self-installed in minutes, to provide either hot aisle or cold aisle containment.

- A non-intrusive mounting system enables rapid deployment in standard rack row aisles.
- Flexible design allows for easy reconfiguration as the needs of the Data Centre evolve.
- Rack top baffles attach to the top of racks; angled for cold aisle containment or vertical for hot aisle containment.
- End of aisle doors available in two formats; bi-directional swing doors or sliding doors.
- Gaps within rows caused by building supports or missing IT racks can be filled with the AisleLok Adjustable Rack Gap Panel.
- Provides similar benefits to full aisle containment systems with the added benefits of great flexibility and ease of installation.
